

THE END TO END SOLUTION FOR YOUR BUSINESS

An All-In-One Robust SaaS **Business Management Platform** For Digital  
Transformation Across All Industries.

## Pusher Configuration Setup

**PUSHER**  
POWERING REALTIME

This option is for real-time notifications, which means that you won't need to refresh the page in case there is a notification.

Before, when new notifications for a user was added you needed to refresh the page in order the notifications to be updated. Now in this case the notification will be real time and will be shown immediately in TaskTak BMP on the top right side.

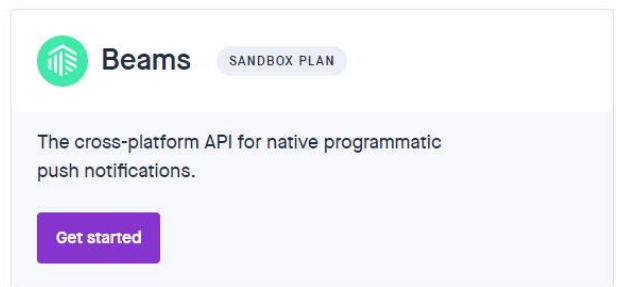

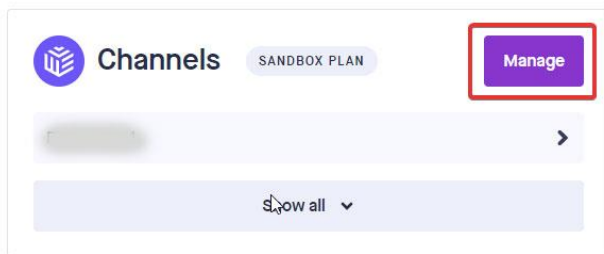

First you need to register to Pusher.com website to use their services.

## Step 1.

Click [here](#) to register if you haven't registered already.

## Step 2.

Login to [pusher.com](#) with your account and on the channels section, click **Manage** as shown on the screenshot below

Feedback

At the top right side, click **Create App**

A popup window will be shown to create your new application.

1. **Name your app** – for example: **TaskTak**
2. **Select a cluster** – By default pusher.com will select your cluster, you can change it if its needed. You can read more here what is cluster: <https://pusher.com/docs/clusters>
3. **Front-end tech stack** – Select **jQuery** as shown in the image below.
4. **Back-end tech stack** – Select **PHP** as shown in the image below

The image shows a 'Create your Channels app' modal form. It has a title bar with a green plus icon. The form contains the following fields and options:

- Name your app**: A text input field with a red circle '1' next to it. The value is '- Docs Test'.
- Select a cluster**: A dropdown menu with a red circle '2' next to it. The selected value is 'eu (EU (Ireland))'.
- Create apps for multiple environments?**: A checkbox that is currently unchecked.
- Choose your tech stack (optional)**: A section with two dropdown menus.
  - Front end**: A dropdown menu with a red circle '3' next to it. The selected value is 'jQuery'.
  - Back end**: A dropdown menu with a red circle '4' next to it. The selected value is 'PHP'.

At the bottom of the modal, there are two buttons: a purple 'Create app' button and a light blue 'Cancel' button.

Click on **Create app** at the bottom of the popup modal.

After the app is created click on the **App Keys** sidebar menu and on the right side you will be able to see you app keys that needs to be added in your TaskTak BMP admin area as define in Next Slide.

Add the keys to the corresponding fields.

1.**app\_id** = APP ID field

2.**key** = APP Key field

3.**secret** = APP Secret field

4.**cluster** = Cluster field

After you add the keys set **Enable Real Time Notifications** to **Yes** and save setting.

That will be all when setting up Pusher.com realtime notifications with TaskTak BMP.

**App keys**

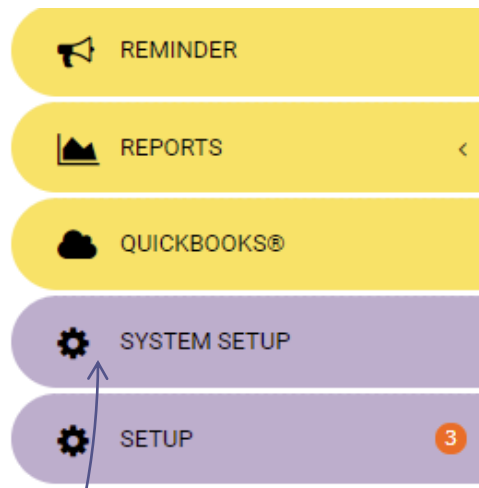

If a token is compromised, you can create a new key/secret pair.  
You should delete the old token once you've updated your app.

Created less than a minute ago Copy

app\_id = "[redacted]"  
key = "[redacted]"  
secret = "[redacted]"  
cluster = "eu"

Create new key and secret

Add Keys in Tasktak BMP as define below
